DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1,2,11, and 12 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1,2,15, and 16 of copending Application No. 10/669,192. Although the conflicting claims are not identical, they are not patentably distinct from each other because the only difference in the claims is the storage of first and second identities of communications circuits in the instant application while the '192 application only recites a stored identity.

3. For example, claim 1 of the instant application recites "...determining a first and second stored identity associated with an arbitration period..." while claim 1 of the '192 application recites "...determining a stored identity associated with an arbitration period..." Official Notice is taken that it would have been obvious to one of ordinary skill in the art at the time of the invention to store a plurality of identities since there are multiple communications circuits which can request access during a given arbitration period and it would be important to keep track of which circuits are requesting access.

4. Similar arguments apply to claims 2,11, and 12 for the same reasons.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Allowable Subject Matter

5. Claims 3-10 and 13-18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. The following is a statement of reasons for the indication of allowable subject matter: After claims 2 and 12 in the instant application and claims 2 and 16 in the '192 application the language of the claims diverges to the point where the claims are no longer obvious over each other.

7. With respect to the prior art, in claim 1 the limitation of "determining whether any requesting communication circuit has an identity that matches the first or second stored identity" in combination with the other elements in the claim is not shown by the prior art.

8. With respect to claim 11, the limitation of "a memory that stores grant information regarding a plurality of arbitration periods..." on lines 4-8 in combination with the other elements in the claim is not shown by the prior art.

Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited references show cell bus arbitration or other bus arbitration systems, but none of the references show the limitations noted above.
